

19" OPERATOR TOUCH PANEL

19" OPERATOR TOUCH PANEL

Blue Line 19" Operator Panels are an elegant and flexible product line that are designed to meet the requirements in life science industries, where hygienic conditions are the cornerstone as well as personnel safety & comfort, and security. Blue Line enables you to optimize the workflow.

Whether used for uninterrupted traceability, formula checking, weighing, quality assurance or for controlling production, they guarantee absolute reliability.

All operator panels can be delivered as a monitor or as an all-in-one unit with build-in PC or client. With a 19" touch screen, operators can easily enter and retrieve data, even when wearing gloves. The bright display offers comfortable working conditions due to its ergonomically optimized screen.

The flexible concept also offers a broad selection of input/output such as USB, LAN, RS232 and more. Blue Line Operator Panel series includes a wide range of mounting solutions ranging from in-wall, on-wall, stand, pipe floor to ceiling mounting as well as customer specific designs, e.g. integration in machines.

The cabinets are consciously designed with slanted sides and rounded edges, as well as smooth partitions, so that fluids – for example, water that has been spilled on the screen or the keyboard – slides off. Rounded edges also mean that products are easy to clean, even in the corners. Combined with airtight joints and high-quality steel, the solutions are perfect for sterile environments.

Blue Line's solutions are high quality, reliable, secure, efficient and compliant to all environments in the food & beverage and life science industries enabling you to optimize manufacturing and workflow.

- Robust fully welded sealed enclosure
- Stainless steel AISI 316 that withstands tough cleaning as VHP and ethanol
- 19" TFT display projected capacitive touch
- Can be operated with up to 3 layers of gloves
- Monitor or with build-in PC/client
- Flexible mounting for wall, pipe, pole, feet etc.
- Connects to 24 VDC or 90-240 VAC. Option for 12 VDC
- Option for adjustable cleanable keyboard
- Option for integrated barcode reader
- Option for USB and serial ports

Construction	Fully sealed enclosure in acid resistant stainless steel AISI 316
Display	19" 1280x1024 TFT LCD screen with P-CAP touch
Brightness	250 nits
Viewing Angle	160/160
Backlight MTBF	50,000 hours
Input	1x VGA 1x DVI-D 3x USB Optional: KVM Thin client and PC
Power Supply	24 VDC or 90-240 VAC Optional: 12 VDC
Operating Temperature	0°C to 50°C
Mounting	Wall Pipe Pole Other options available according to requirements
Option	Integrated KVM for remote access to PC/server Integrated PC or client according to requirement Integrated according to requirement
Warranty	1 year Optional: extended to 3 years
After-sales Support	1 year Optional: extended to 3 years
Dimension & Weight	401x468x87 mm
Order Information	Contact the Blue Line Sales team for more information

Blue Line's products and services range from standard products to customized solutions made specifically to meet your needs. We have 30 years of experience in customized solutions. Our main business is within following areas: Industrial Computers and Displays, Rugged Mobile Computers, Supermicro and Digital Signage. Blue Line vision - IT EveryWhere - demanding IT solutions for demanding environments
